

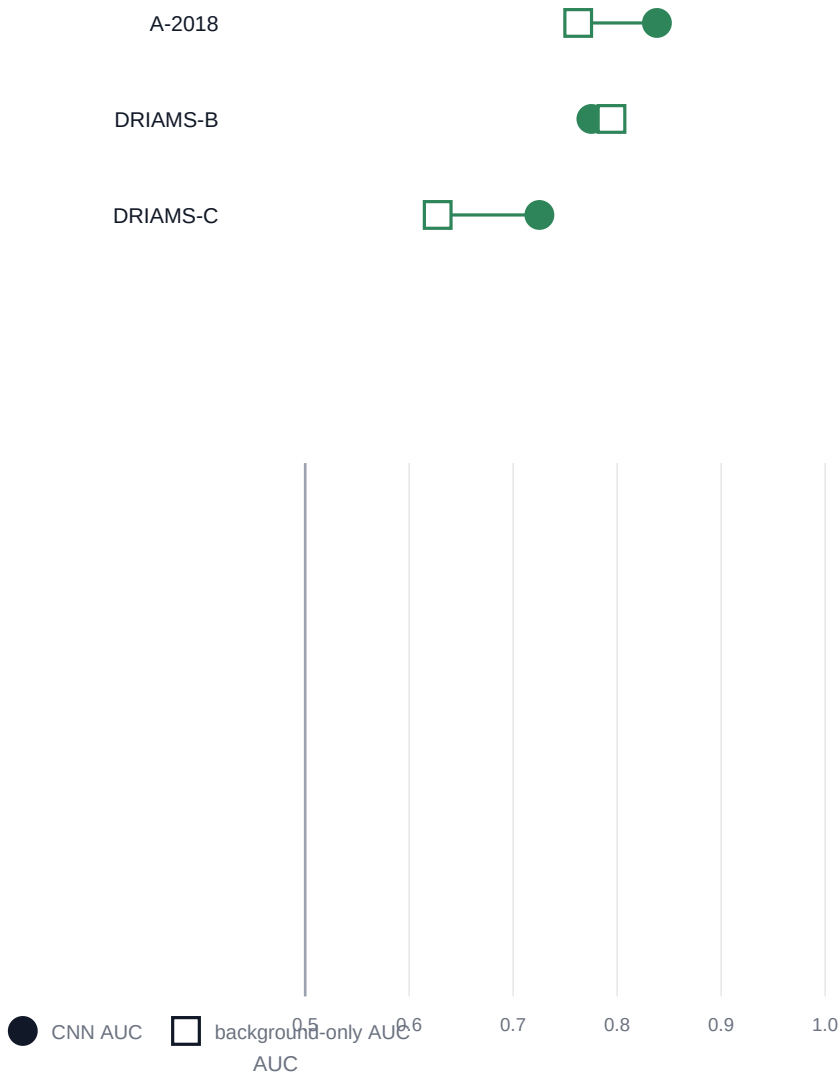

Fig. 6 | CNN vs. background-only AUC: second organism validation

Filled circle = CNN AUC; hollow square = background-only (exact co-resistance signature) AUC. Positive delta = CNN exceeds background.

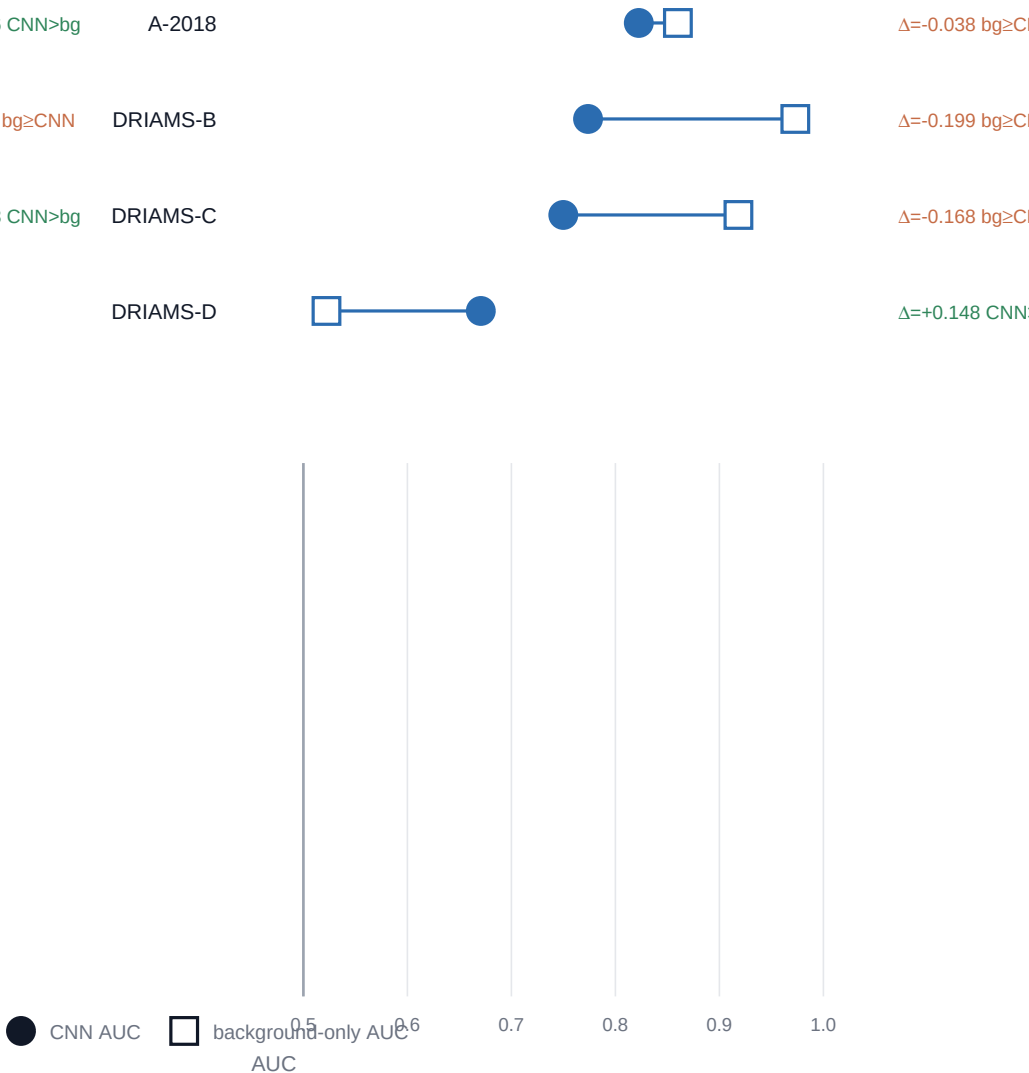

S. aureus / Oxacillin

CNN exceeds background at source and DRIAMS-C (mecA/PBP2a structural phenotype).

E. coli / Ciprofloxacin

Background is competitive at external sites; CNN exceeds only at DRIAMS-D.

Background-only AUC: predicts focal drug from co-resistance signature without MALDI spectra (exact-background smoothed prevalence).
