

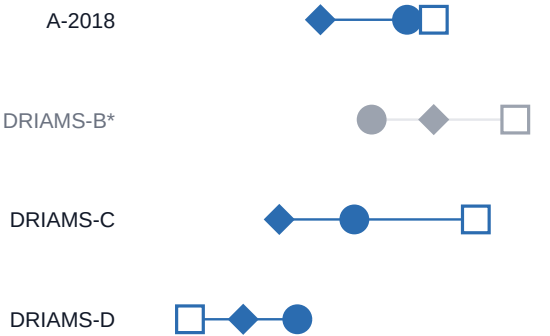

Fig. 6 | Three-way AUC decomposition: raw MALDI, co-resistance-only, background-centred

Filled circle = raw MALDI AUC; hollow square = co-resistance-only AUC; filled diamond = background-centred MALDI AUC. * = sparse matched support (cautionary).

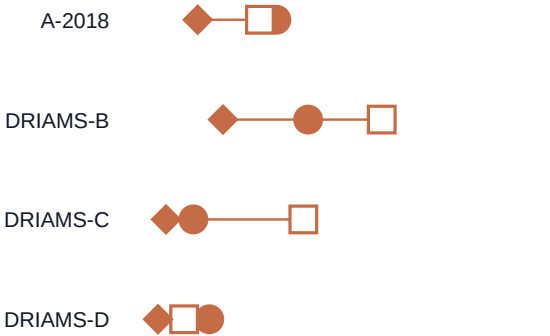

E. coli / Cipro

MALDI exceeds co-resistance-only at DRIAMS-D; centred AUC above chance at all interpretable sites.

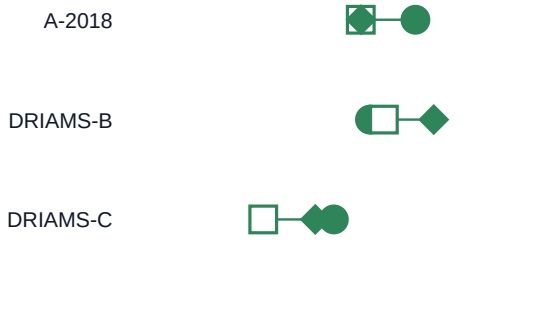

E. coli / Amox-Clav

Co-resistance-only matches or beats MALDI at external sites; centred AUC collapses to chance.

S. aureus / Oxacillin

MALDI exceeds co-resistance-only at A-2018 (+0.076) and DRIAMS-C (+0.098); centred AUC retained at both.

● Raw MALDI AUC □ Co-resistance-only AUC ◆ Background-centred AUC

Co-resistance-only baseline: predicts focal drug from co-resistance AST signature only, without MALDI spectra (exact-background smoothed prevalence, leave-one-out).
